The antibody is suitable for the development of immunoassays or immunoaffinity purification columns.

| Sensitivity: | Target Specificity*: |
|--|--|
| 10 ng/mL Amitriptyline produces 67% inhibition in a competitive ELISA employing Tricyclic Antidepressants (TCA) (1) polyclonal antibody. | ELISA microtitre plate based and expressed as % crossreactivity*. The antibody exhibited crossreactivity for the following compounds: Imipramine 20.45%, Nortriptyline 3.1%, Desipramine 2.15%, Dothiepin 167.7%, Doxepin 84.3%, Nordoxepin 3.3%, Cyclobenzaprine 103%, Trimipramine 2.5%, Protriptyline 3.8%, Lofepramine 1.87%, Norclomipramine 4.5% and Chlorpromazine 16.9%. |
| | * Cross reactivity profile may vary with tracer used. |

Notes & Precautions:

Antibody can be affinity purified on request. This product as supplied is intended for research applications only, not for use in therapeutic or diagnostic applications without the expressed written authorization of Randox BioReagents. A safety data sheet (SDS) can be supplied upon request. Vial should be centrifuged briefly before opening to ensure all material is removed from the vial cap.
