

ST2		Human, Recombinant, <i>E. coli</i>		
Cat. No.:	RCP9387 RCP9388 RCP9389	Size:	10µg 100µg 1000µg	

- Synonym: Interleukin-1 Receptor-like 1; IL1R1; Homolog of mouse growth stimulation expressed gene; Homolog of mouse ST2.
- **Description:** The ST2 gene is a member of the IL-1 receptor family, encoding a transmembrane protein with a structure similar to IL-1R1. A soluble form of the protein (ST2) is produced from the same gene by alternative splicing and is reported to be expressed in several cell types including fibroblasts and mast cells. Soluble ST2 has been reported to act as a negative regulator of Th2 cytokine production and elevated levels have been reported in several disease states and conditions including asthma, sepsis and myocardial infarction.

**RANDOX** recombinant ST2 comprises a 310 amino acid fragment (19-328) corresponding to the soluble ST2 coding sequence and is expressed in *E. coli* with an aminoterminal hexahistidine tag. This product is for research use only and is not intended for diagnostic or therapeutic use.
